

BIZCOURIER WEB SERVICES

Dear Clients,

We would like to inform you that BizCourier can now offer you the ability to verify whether a given address is a complete and real address or incomplete directly from your company's software or website by taking advantage of Address Accuracy Web Service.

Requirements	
Method	Description
addaccuracy	Returns as a result an array containing accuracy level of the address, and other basic info for the given address.

Web Service Call Input Fields

Input Fields	Description
Country	The 2 digit ISO for the country. Example Greece = GR, Spain = ES, Italy = IT
Address	The address you want to check without comments. Only the street name followed by the street number. Example Nazionale 55
Region	The City or Area or Region of the Address. Example Rome
Postal_Code	Postal Code. Example 00184

Web Service Output Fields

Output Fields	Description
Error	0 = Success
Given_Address	The full address which you check
Formatted_Address	The full address (which was) found according to given data.
Accuracy_Level	Number from 1 to 4. 1 = Accurate Address 2 = This is not a fully accurate address. The street name may have been recognized, but not the specific number. 3 = Less than 50% accurate - only a small part is recognized. 4 = Less than 30% accurate. Check Again
Description	Description of the accuracy level.
Link	Google maps link for the given address
Longitude	Longitude of the given address
Latitude	Latitude of the given address

WSDL

The WSDL file can be downloaded from the following address:

https://www.bizcourier.eu/pegasus_cloud_app/service_01/bizcourieraddaccuracy.php?wsdl

or emailed to you on request at itsupport@bizcourier.eu

You may start testing it with SoapUI Software by clicking on the link below: <http://www.soapui.org/>

If you require any further information or clarification please email your queries to itsupport@bizcourier.eu and we shall be more than happy to assist you.
